

METHOD AND APPRATUS FOR MEDICAL COVERING GROUP REQUEST PROCESSING, REVIEW AND MANAGEMENT

Abstract

Certain embodiments include a method for a first covering group member belonging
5 to a covering group of using a request list containing a request list component for
each of the covering group members. The covering group containing at least two
covering group members. Each of the request list components further contains a
request summary collection containing at least a past-due request summary and a
immediately-due request summary. The method includes the user performing the
10 following. Selecting a second of the covering group members belonging to the
covering group. Selecting a first of the summaries of the request summary collection
contained in the request list component for the second covering group member.
Perceiving a request detail report for the first summary of the request summary
collection contained in the request list component for the second covering group
15 member containing at least one request report comprising a requestor name, a
requested item, a request response list containing at least two request responses.
